PFAS General Statement

Per- and polyfluoroalkyl substances (known simply as PFAS) are a large class of thousands of synthetic chemicals used throughout society. Their unique structure is made up of long-lasting chemicals, components of which break down very slowly over time. PFAS are increasingly being detected as environmental pollutants, and some are linked to negative effects on human health. PFAS have been restricted by various regulations in the European Union and other countries around the globe for their toxicity to humans and the environment, and there is a continued push for new regulation to prevent these types of chemicals entering our environments.

Here at Accurate Manufactured Products Group (AMPG), we understand the severity of PFAS and work to prevent them being introduced into our parts. **To the best of our current knowledge and understanding, no PFAS are added into our parts throughout our standard processes.**

However, due to the various methods and chemicals used by our post processing vendors, parts that go through these processes have more of a risk of PFAS introduction. **Currently, to the best of our knowledge and understanding, none of our standard post processing methods/vendors introduces PFAS into our parts, but these will have to be reviewed and certified on a case-by-case basis.**

For more information about PFAS and current regulations, please visit the EPA website at: <https://www.epa.gov/pfas>

Sincerely,
AMPG Quality Team
